

XYPEX CONCENTRATE

XYPEX
CONCENTRATE

*Concrete Waterproofing
By Crystallization™*

KEY BENEFITS

- Can seal static hairline cracks up to 0.5 mm
- Highly resistant to aggressive chemicals
- Non-toxic / no VOCs
- Permanent solution requiring no further maintenance
- Cannot puncture, tear or come apart at the seams
- Becomes an integral part of the substrate
- Resists extreme hydrostatic pressure
- Does not require a dry surface
- Is permanent
- Extends service life of concrete
- Less costly to apply than most other methods

Waterproofing, Flooring & Concrete Repair Industries

XYPEX CONCENTRATE SURFACE APPLIED WATERPROOFING, JOINT AND CRACK REPAIR

Xypex Concentrate consists of cement, finely graded sand, and active proprietary chemicals; it is applied as a cementitious slurry to the pre-saturated surface of existing above and below-grade structures. The active chemicals diffuse into the substrate and react with moisture and the by-products of cement hydration to cause a catalytic reaction.

This reaction generates a non-soluble crystalline formation throughout the pores and capillary tracts of the concrete, as well as cracks, permanently sealing the concrete and preventing the penetration of water and other liquids from any direction, even under high hydrostatic pressure.
